PUBLIC LIBRARY ON WATER- DURRËS

Shpjegime

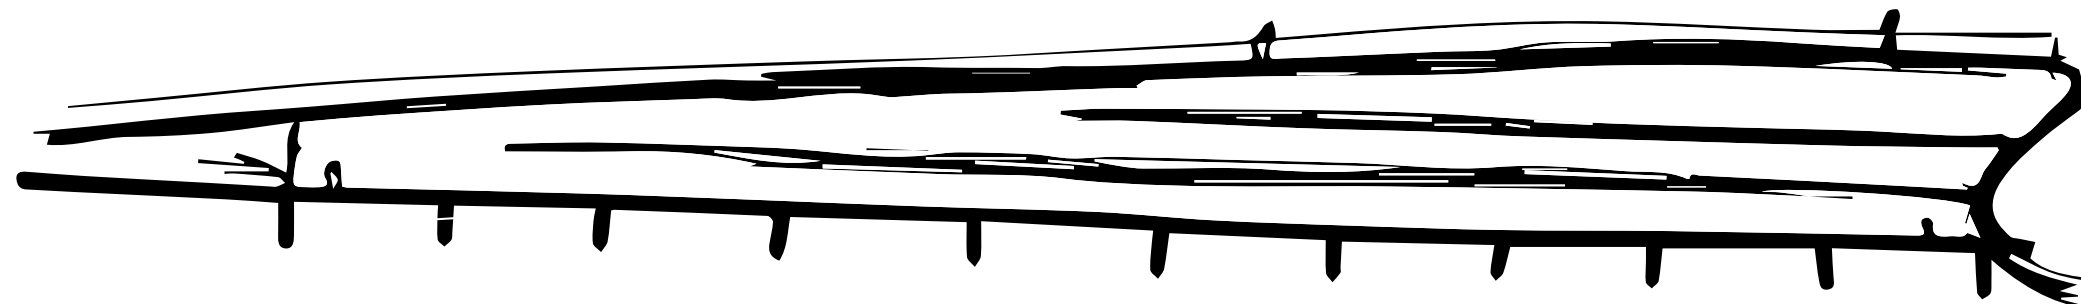

The conceptual proposition arose as a desire to design an elegant object which would initially perform its function best and then adapt to the context in which it would be built (over water). For this reason the object has a linear shape where in the altimeter it is wavy.

1

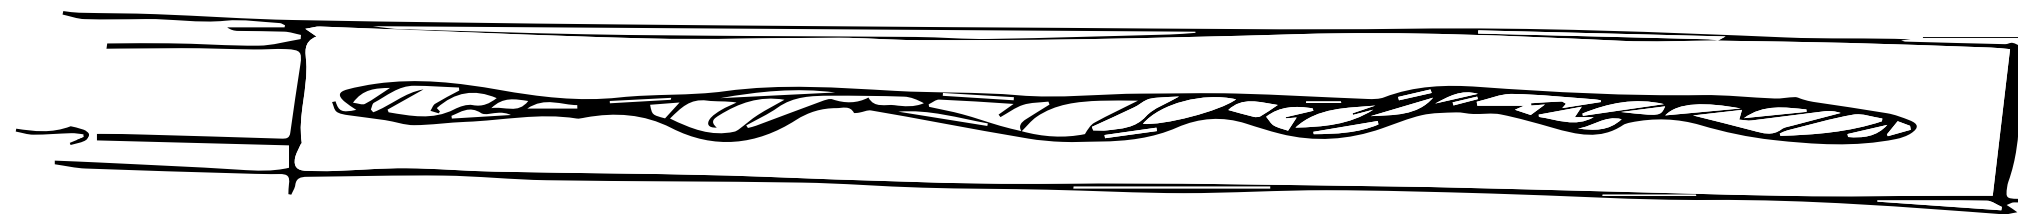

Based on the analysis made on the existing condition of the library, the volumes that are in it and taking into account the design norms of a library, the facility should be organized in 3 levels.

2

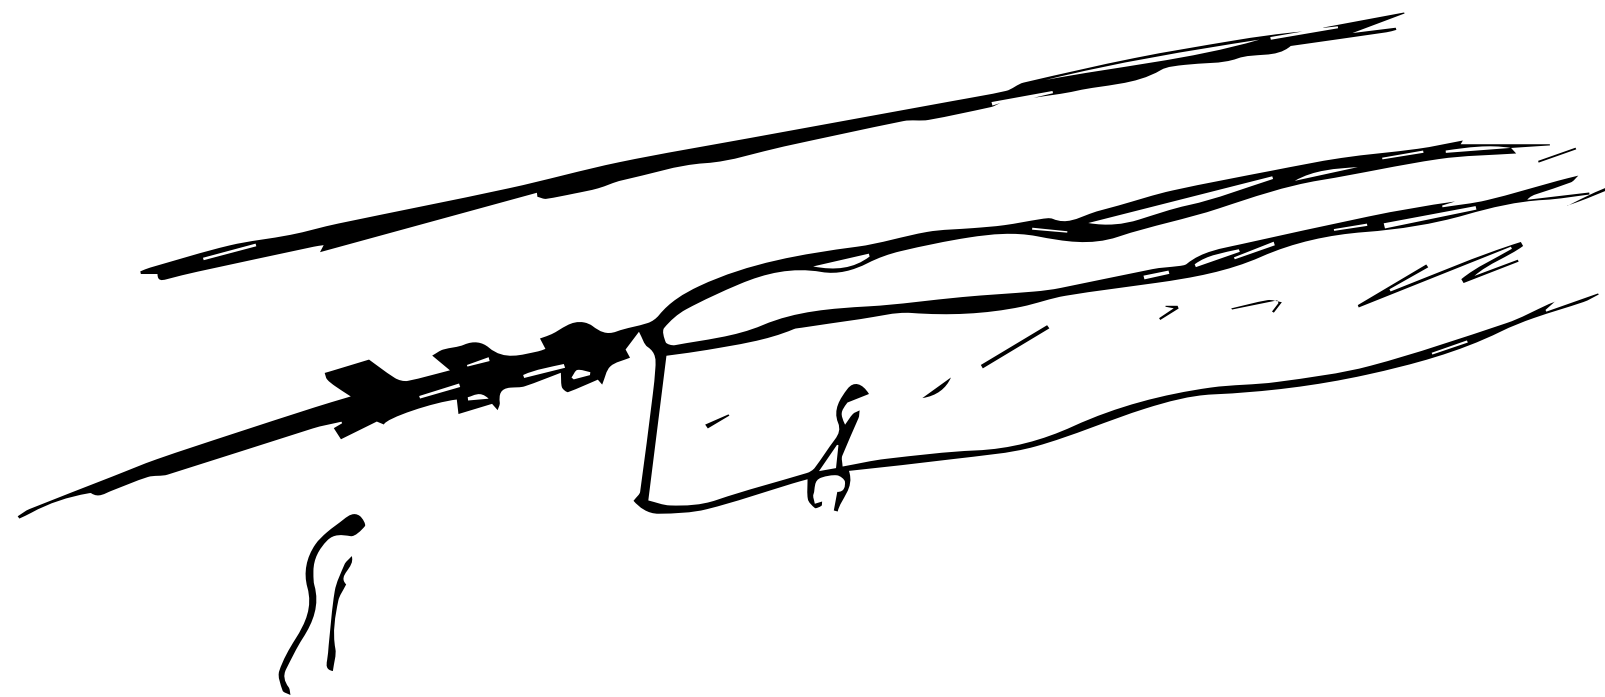

Duke qenë në një pozicion strategjik, vazhdimi i aksit të shëtitorës, mbulesa e bibliotekës do të shërbejë dhe si shëtitore për qytetarët dhe do t'i mundësojë ndricim natyral hapësirave të brendshme.

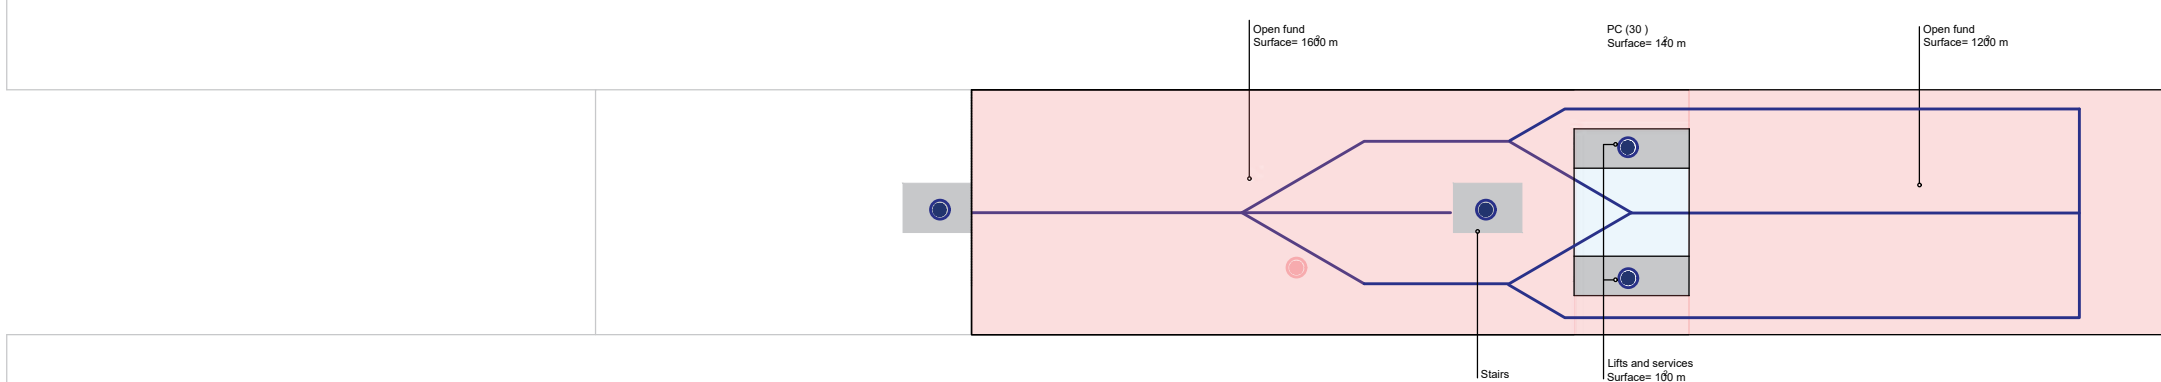

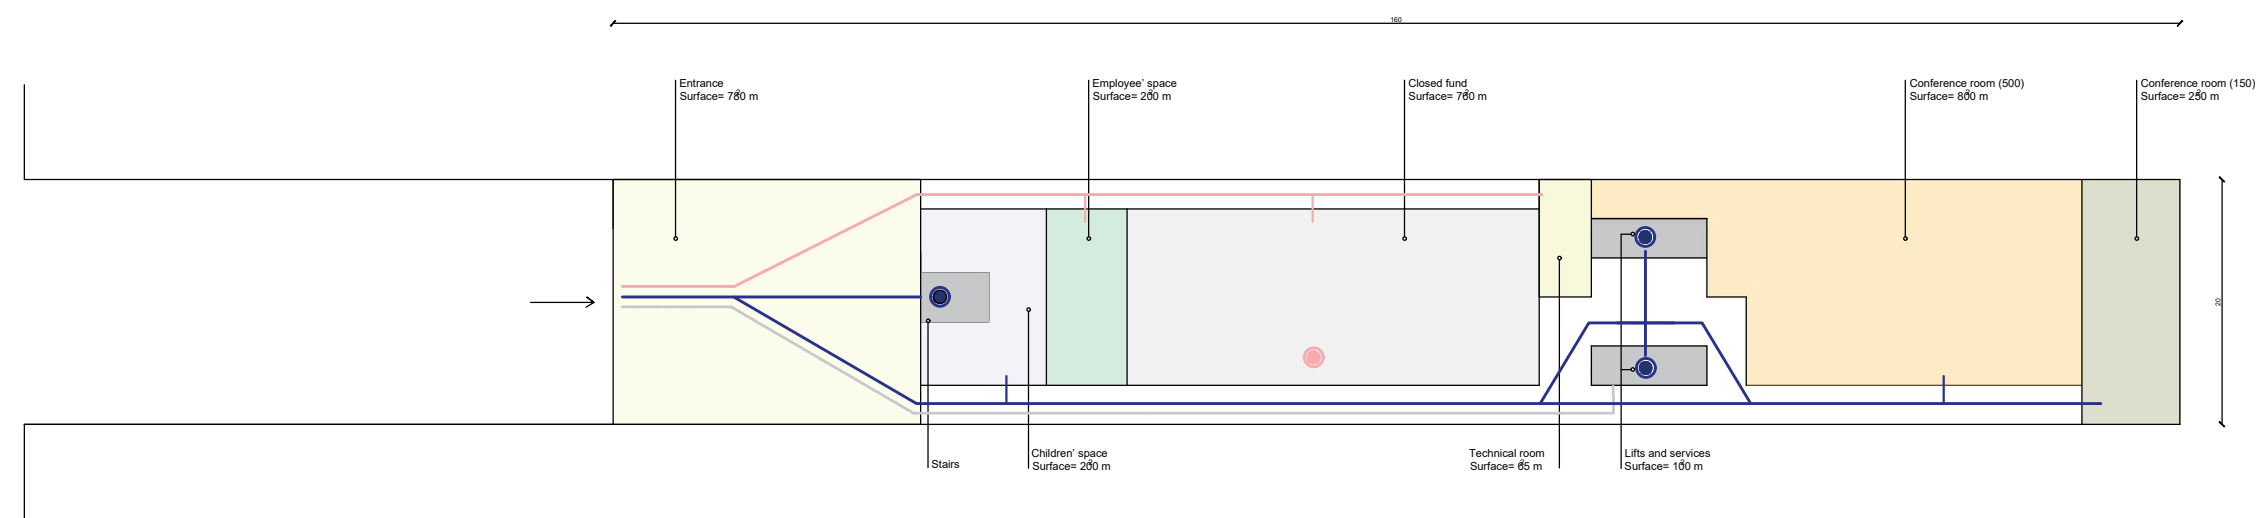

3

Carjet në mbulesë do të korespondojnë, aty- këtu, me hapësira rekreative prej xhami, të cilat do të shërbejnë për gjelbërim dhe për të thyer monotoninë e mundshme të hapësirave.

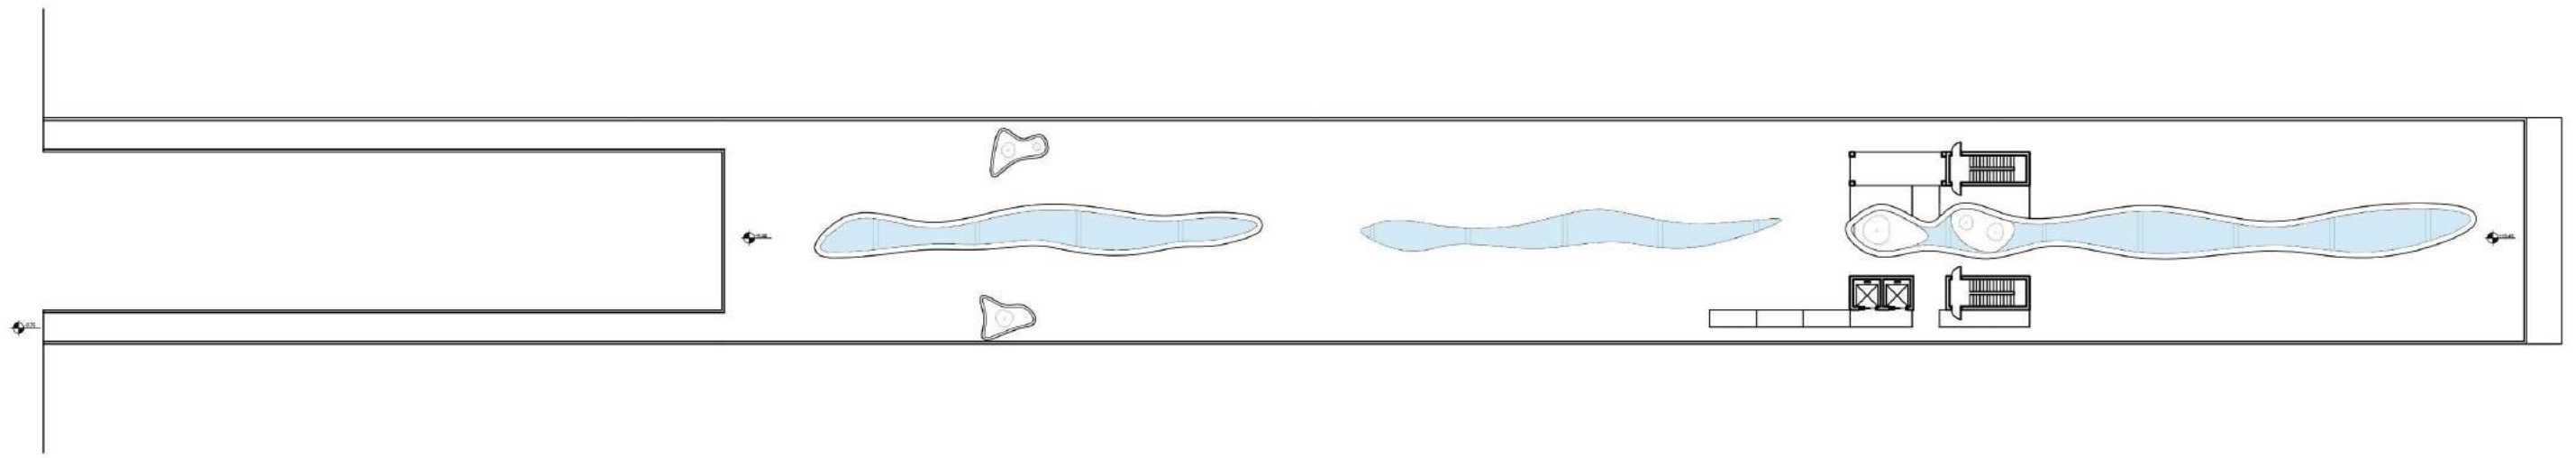

4

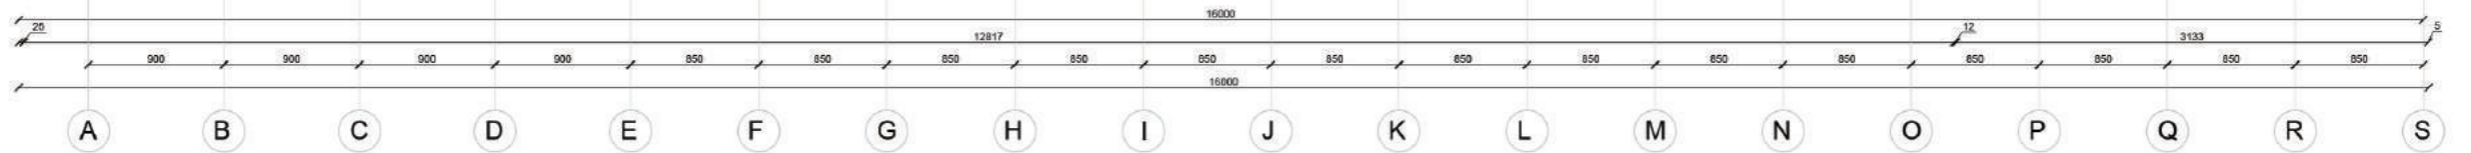

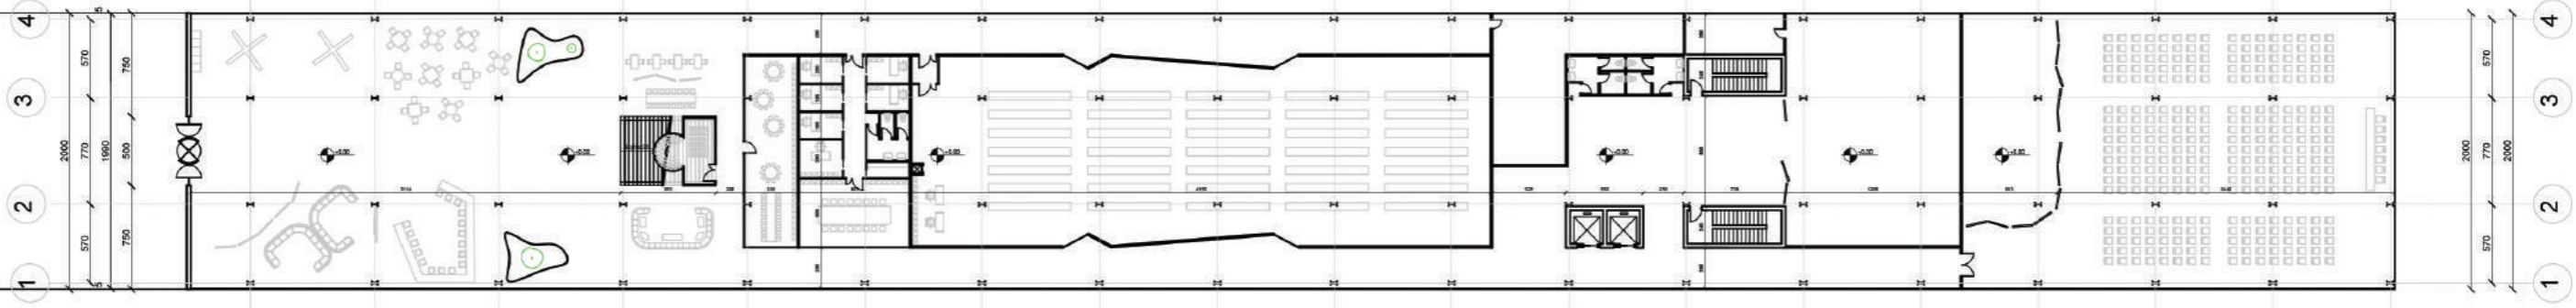

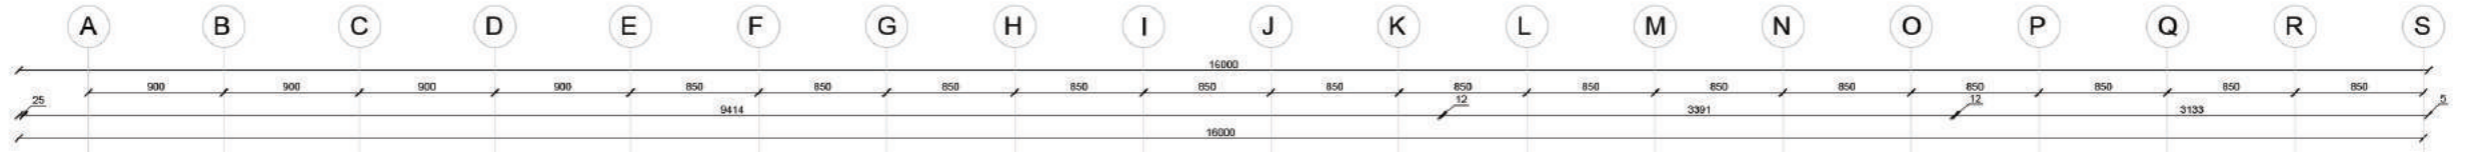

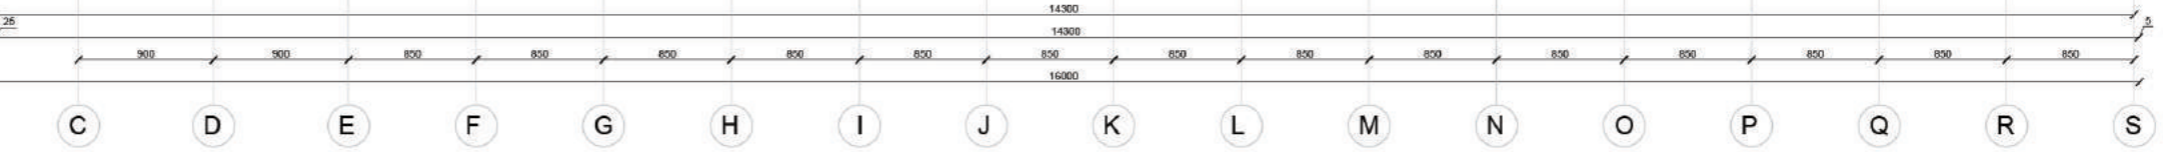

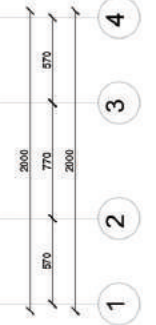

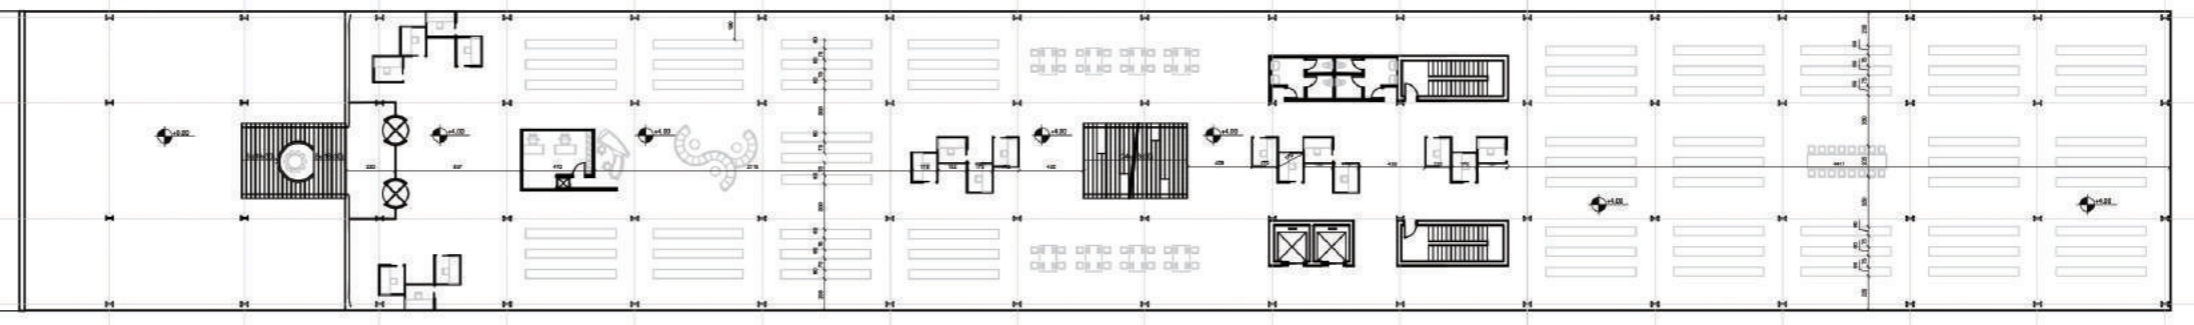

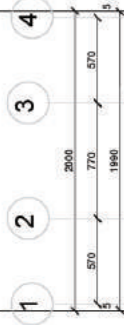

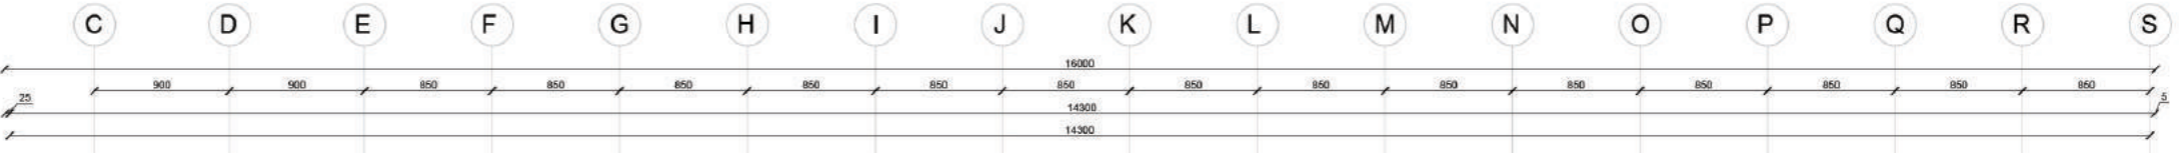

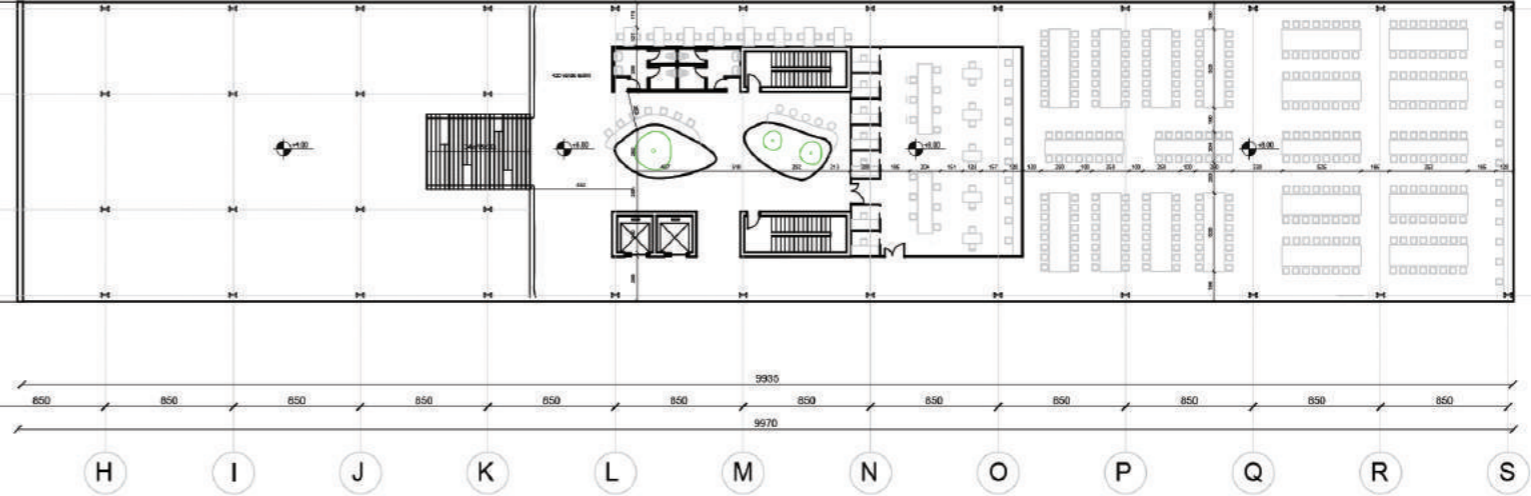

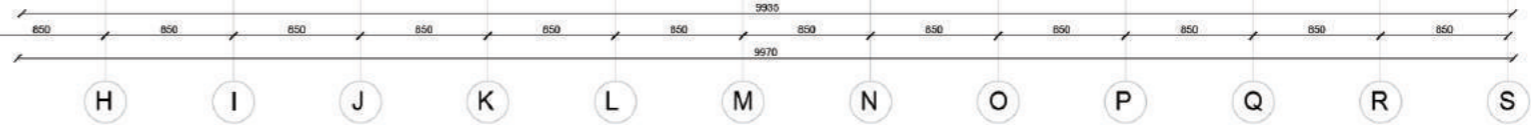

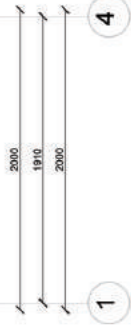

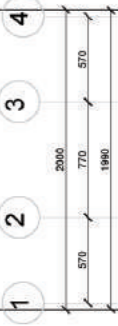

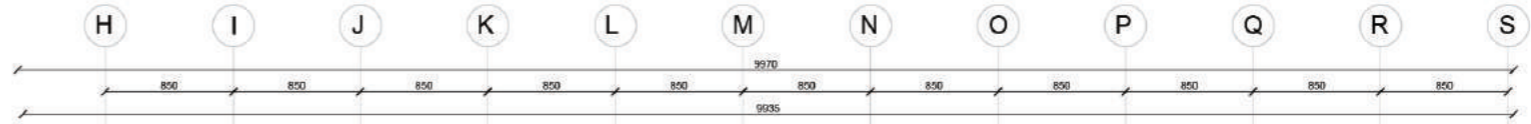

Functional organization is done following the logic where functionality is primary. So the spaces are placed in such a way that they are easily accessible and the movement is as fluid as possible. Near the entrance are placed those spaces where users will be "everyday", while then are positioned the spaces that are rarely used. In altimetry, the primary condition is the comfort of the users, the physical and acoustic one and the safety of the books. In this way, the most public spaces are located on the ground floor, while on the other two floors are the reading rooms, the study rooms and the open book fund.
