

Green Theatre

Project idea
The vision is to create a new cultural centre that can give a benefit into the urban community. And create such an inclusive place for people to gather and express themselves.

Project description
Main idea is to create a sense of community in this complex, inspired by Burkina faso village structure. This clustered planning gives this complex a vibrant and creative atmosphere. Gives a privacy but also gives such sense of openness in this complex. Realising the ego of an artist. I intended this design to have many open spaces so the artist can freely fill the voids with their art.

Technical Information
To overcome the extreme heat in Burkina Faso, I designed the shading that connected this whole area. This design uses a local material construction such as adobe brick and combined it with modern material such as space frame steel. So the building is energy efficient.

- WORK**
1. The stage
 2. The backstage
 3. Dressing rooms
 4. Restrooms
 5. Meeting room
 6. Technicians room
 7. an open terrace
 8. construction and storage for stage sets
 9. workshop for repair
 10. a sewing workshop
 11. a truck access
 12. a technical cabin room
 13. a garage parking
- LABO**
14. a modular media room
 15. 4 educational spaces
 16. a co-working space
 17. an archive room
 18. a music recording studio
 19. a studio photo studio
 20. a video editing room.
- SHOW**
21. points of sale for tickets,
 22. seating and
 23. a space of conviviality
 24. place for temporary stalls
 25. Advertising and signage
