

CONCEPT

"The distinction between past, present and future is just an illusion. Everything is connected."

The Technological Innovation Center (TIC), located in the heart of the University CampusSTU in Bratislava, is conceived by the need to connect past, present and future. The resource of light and simple volumetry are mixed in a timeless building, allowing the structure to continue in time, while its flexibility allows it to transform and adapt to new needs throughout its life. All condition of existence, without exception, is subject to change. Its social areas in the ground are a large entrance hall for the entire population, where a large cube is suspended as a symbol of knowledge and technology. We have designed the ideal context that allows exchange and participation. TIC is where the spirit and the body merge
