Pontianak City Cycling Community Center

According to Becker *et al.* (2018), bicycle is a sustainable transportation and it has been proved to make a significant contribution in making cities an attractive place to live. Cycling trend in Pontianak City has existed since 2000. In 2005 the Bike to Work community was formed and until now more than 20 bicycle communities have been formed in Pontianak City. Members of the cycling community need a place to gather and share their interest in cycling, and people need a safe place to play and practice cycling. This design is in line with the commitment of the Pontianak City Government to realize Pontianak City as a bicycle-friendly city. The main purpose is to provide an interactive, flexible, and combine meeting point with the shape of bicycle wheels as part of the design.

Background

Bicycle as a sustainable transportation

Bicycle trend in Pontianak City since 2000

20 bicycle communities have been formed in Pontianak City

Commitment of the Pontianak City Government to realize Pontianak City as a bicycle-friendly city

Issues

Members of the cycling community need a place to gather and share their interest in cycling

Parks in Pontianak City haven't educate people about bicycles

Parks in Pontianak City haven't meet the daily needs of cyclist, such as the need to clean themselves by taking a bath

People need a safe place to play and practice cycling
