

Fish net knitting & weaving

Unused fishing nets will be re-woven and revived by the natives with that skill set, so they can be used for the envelope of the structure and bags will be made out of nets and will be filled with used empty plastic bottles which is to be used as the floating apparatus.

Making floating bags

Once the empty bottles are sorted gathered, they will be filled in to the bags made out of nets and stitched. The mechanism is a low-tech primitive method which can be easily executed by a group of fishermen since they are familiar with the application.
