CONCLUSIONS

In the area are tram and bus lines. There could be a bus stop closer to the study area. There is also a railway line as well one railroad. The city has no separate areas paths and trails for cyclists. The area borders on Dk79. The main communication routes are close, thanks to this residents of Bytom, Siemianowice Śląskie, Ruda Śląska and Katowice will have quick access to the place. In the environment residential buildings prevail. Service facilities are away from the building area. However, these are distances accessible by foot. From the layout of the buildings you can read the approximate city grid a lot of green areas. Green comes in form irregular spots. From the south, the plot is characterized by a slope which is very steep and high. The difference of terrain is up to 9 m. The area also has a wetland.
