

# Ab sur d

Our project is located on Begej channel in the city of Zrenjanin (Serbia) on the spot where the stream of the channel creates an island. This island is called "Little America" because of its isolated morphology and is an interesting urban area of Zrenjanin filled with cultural and natural heritage, such as the buildings of the Courthouse, Prosecution office, jail, old factories, churches and many parks. One of its most striking features is the only bridge in the world that spans bare ground and therefore is called locally "The bridge on dry land" or just "Dry bridge". We wanted to underline and promote this local phenomenon and hence our project's topic is absurd and contrast creating a longitudinal "water" bridge which wraps the island, instead of a usual transversal, and in the case of Zrenjanin, instead of the existing "dry" bridge. This dry ground underneath the Dry bridge resurfaced inter alia due to global warming and our focal point is creating visual continuation of the channel by using reflection and assuring its functioning waterway slits for tourist boats tours, as well as designing a boat port.
