

RESURFACING OF FUTURISTIC WRECKS

Ambitions for the new civic centre

The new civic centre will become a new place of interest where people can **learn and entertain** themselves at the same time. Learning and fun must be interconnected, this can only be achieved with an architecture that **inspires souls**. The centre will accomodate spaces such as exhibitions, **digital learning spaces**, **workshops**, museums and an auditorium.

The idea of the project is to **bring back the history** of the ships that once inhabited the area to inform people about the past while guiding them to **learn more about the future**.

The proposal will **revisit the landscape** and reshape the area to create a new adventurous and emblematic experience.

A lot of attention will be paid on the **sustainable** aspects to create a building that will not fear the **pass of time** and make use of every **natural feature** that can be exploited to improve the spatial and environmental quality.
