

“A new heart to the Beirut city,
A breathing space to the community,
A smile on the Beirut people.”

TERRACED WATERFRONT

The terraced waterfront city welcomes citizens of all ages and backgrounds with connections to different neighborhoods divided by existing transportation infrastructure.

New pedestrian pathways, welcoming entrances, and integrated transit allow the site to be easily accessible from near and far.

Public facilities such as museums, galleries, theatres, libraries, schools, duty-free markets, and the memorial park would be sites for social connections. The housing units are scattered around the public spaces and obtain higher accessibility and more convenient adjacency than typical residential neighborhoods. Playgrounds, sports fields, and open cafes situated on terraces would attract citizens to this daily magic of the greens.

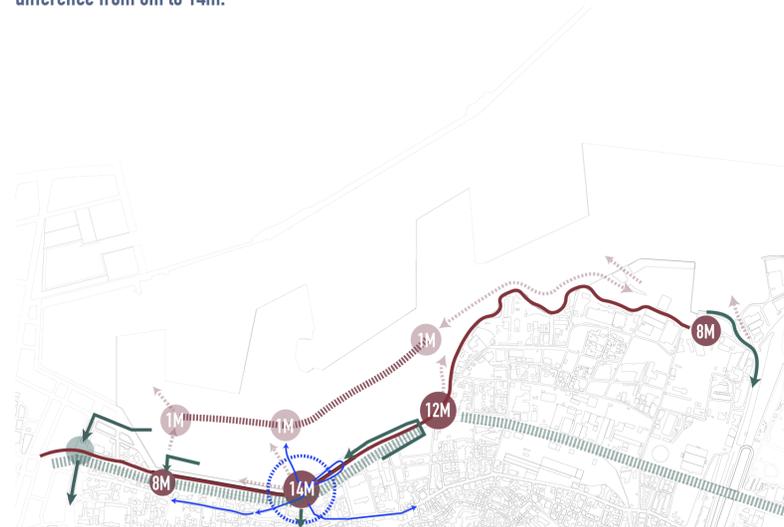

1. BRING PEOPLE TO THE WATERFRONT

The initial aim is to design an energetic site to boost the injured city. Thus the site must be accessible and alluring to people from the city.

2. HARD TO ACCESS

The Beirut port has only one main pedestrian entrance. The waterfront and the city also have a height difference from 8m to 14m.

3. INSPIRATION BEIRUT CITY TOPOGRAPHY

Beirut's building blocks are very densely allocated on the slopy land. The warmed earthy material is found mainly on the building blocks. Hence resulted in a solid and unique city fabric.
