- 21. Ro-Ro Quay
- 22. Dry Bulk Quays

Implementing the automated port to the site requires less land use, less noise, and more efficiency, thus returning more public spaces to the people.

With the automated new port of Beirut, this new district would act as a breathing point to the high industrialization of the port and the very dense city fabric of Beirut. Designed to cultivate a vibrant lifestyle for the locals,

The large variety of public spaces with diverse activities would support all users' physical and mental equity, aiming to reinforce shared experiences and forge new communal connections. Preserving the unique city language and culture for the locals.

a. The main public entrance to the memorial park  
b. Residential block to the memorial park
