

### RESIDENTIAL AREA + TEMPORARY HOUSING (REFUGEES)

- There is a need for temporary housing for those residents that have lost their homes as well as for the refugees that are seeking for a place due to the conflict in their country (Syria)\*- temporary structures, adaptable. These temporary structure should be adaptable so that they could be transformed in the future into different types of housing or working spaces.

\*after conflict in Syria in 2011, top two countries that Syrian citizens sought refuge in, were Turkey and Liban.

### WORKSPACE

- Due to the high unemployment rate and the lack of local production present in the city coupled with the destruction and the hindrance of the port operations, exacerbated by the explosion, we are proposing to create working spaces.

### RESIDUES OF THE BLAST

- The blast of the area resulted in creating a lot of waste in material such as steel, wood and glass that could be potentially reused in regards to renovating the area.
