

## THE SHARED SPOON

NEW FLAVOURS, OLD STORIES @ THE CLONAKILTY OLD MILL

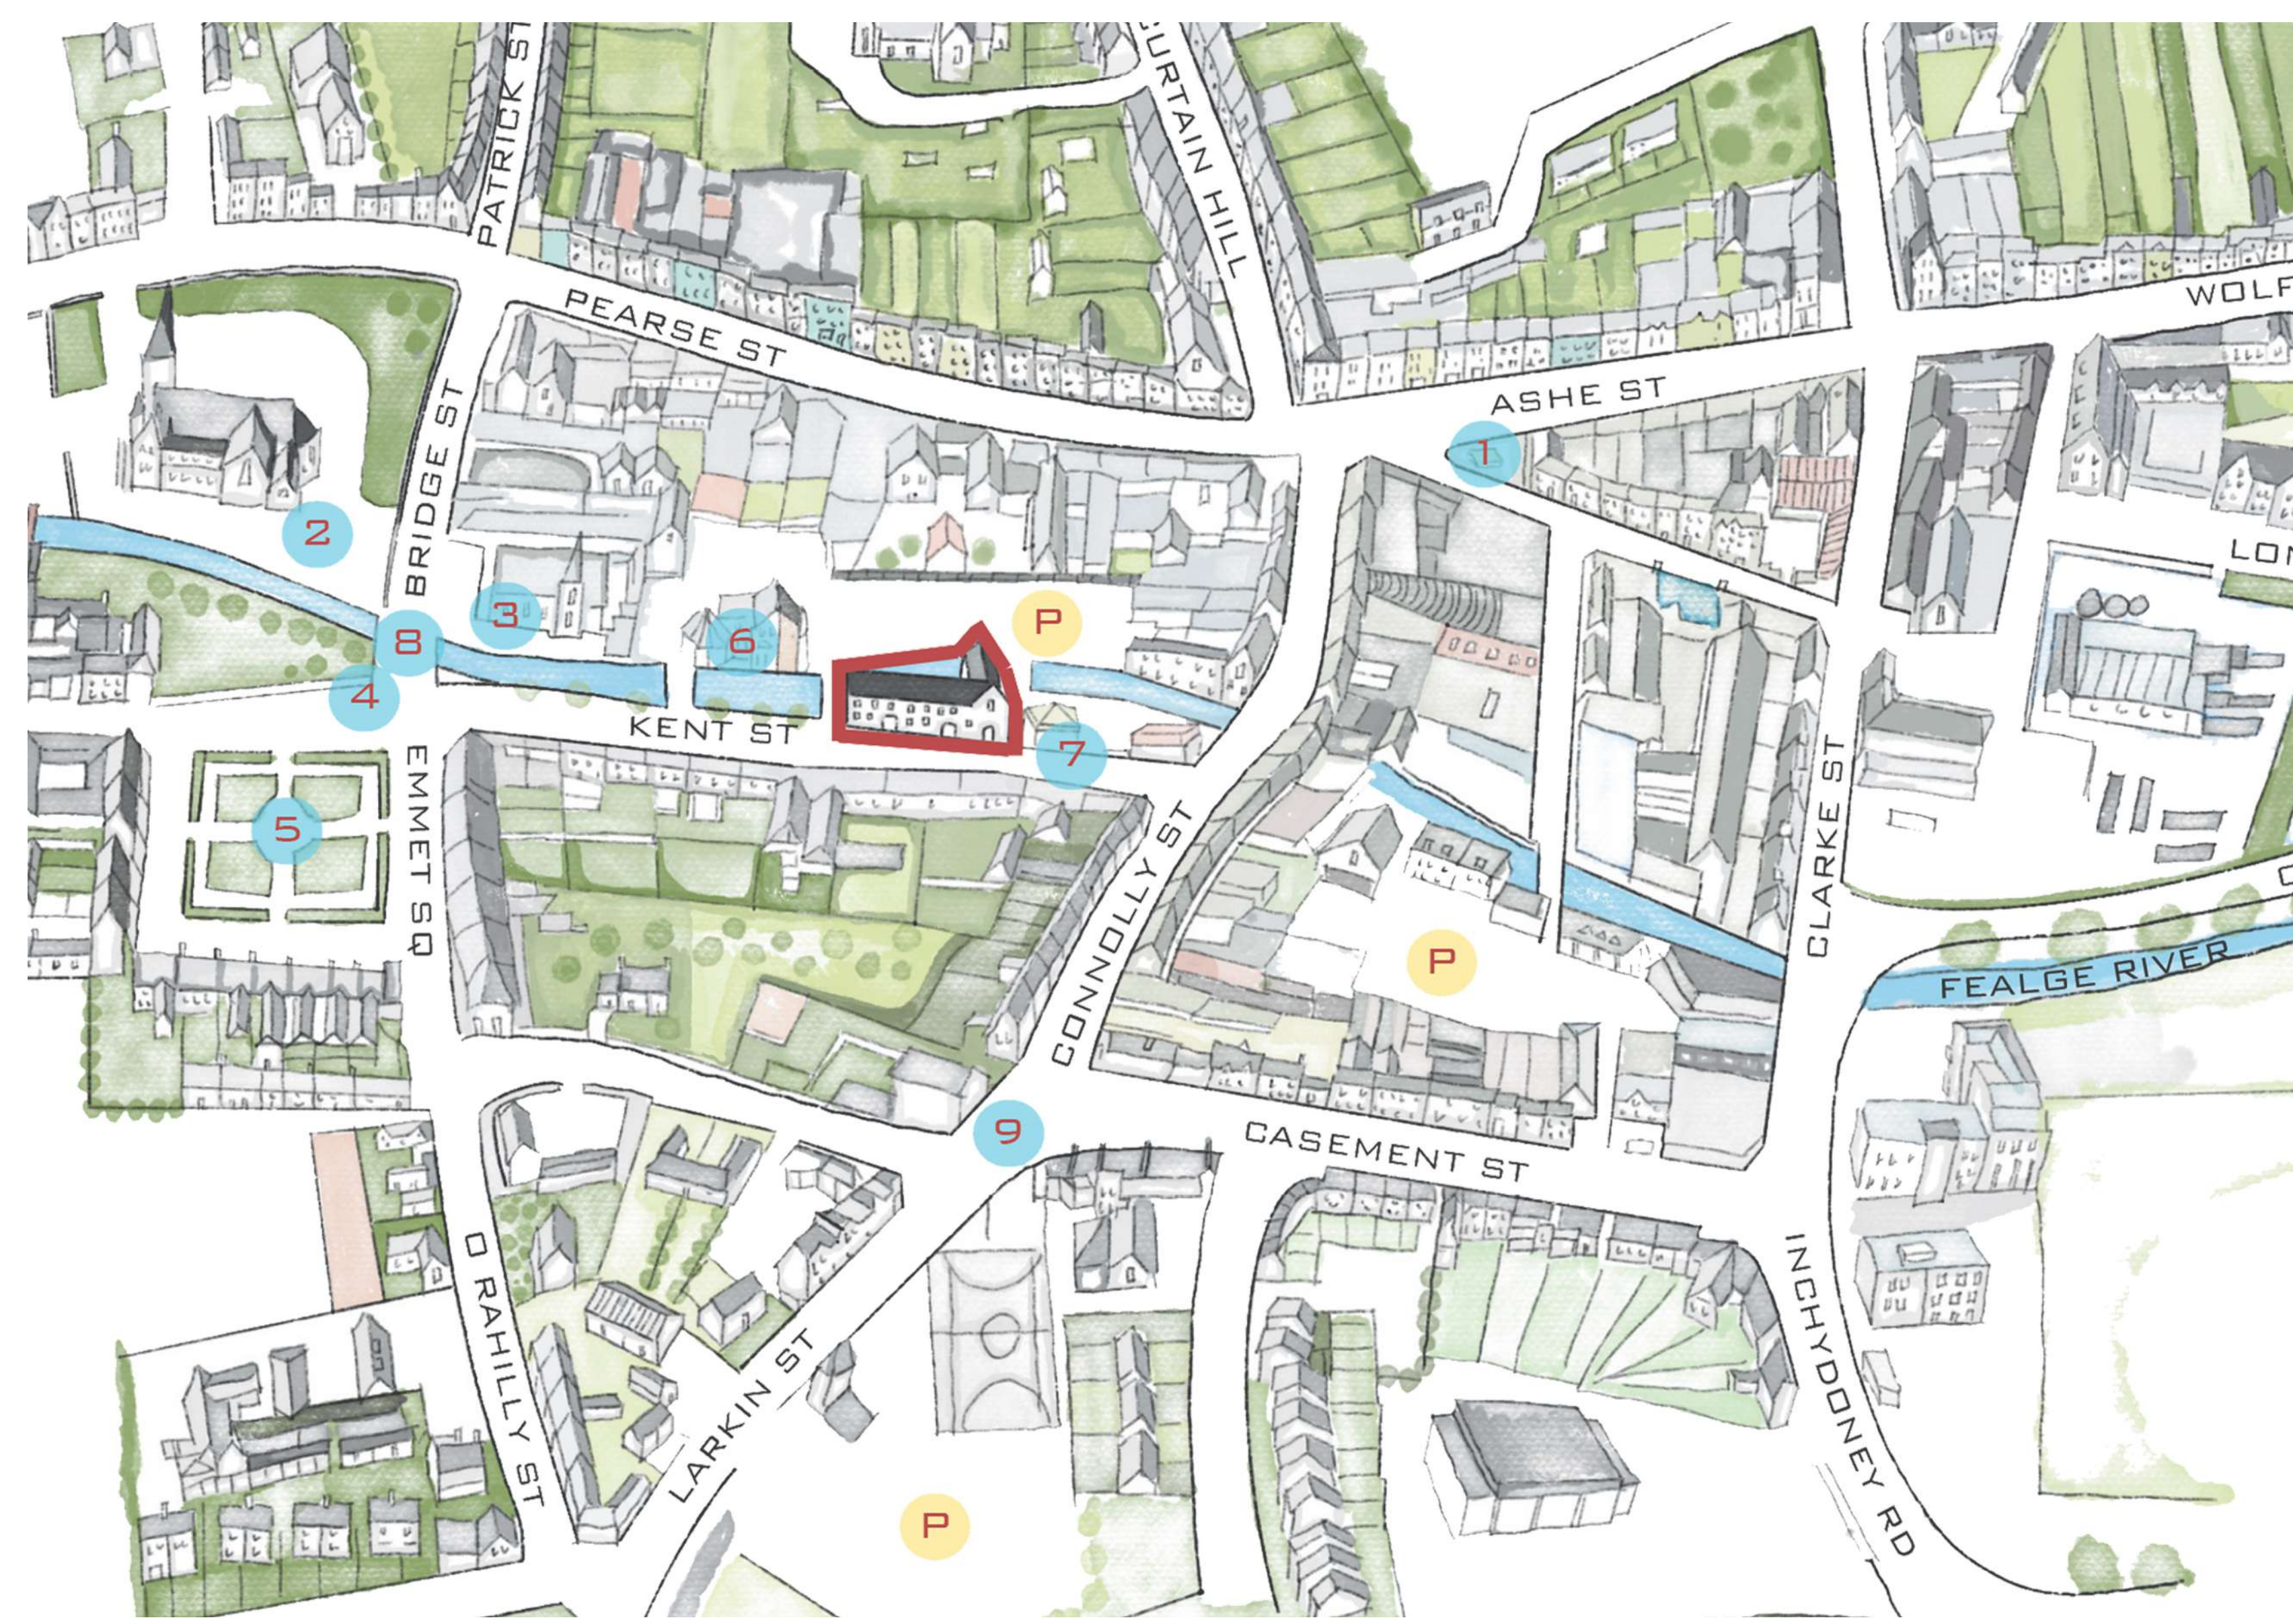

The final design scheme proposes a sensitive intervention within the existing mill building, transforming the space into a community-focused environment centred around food culture, education, and social interaction. The scheme is informed by the concept of tapering, developed through observational sketches and onion studies, which guided the formation of walls, thresholds, and circulation throughout the project.

Spatial experiences of compression, release, and framed views were used to create a layered journey through the building, encouraging moments of pause, interaction, and discovery. The proposal balances preservation and intervention by retaining the industrial character of the existing structure while introducing clear and restrained architectural elements that support contemporary public use. Through exhibitions, workshops, cooking classes, and communal spaces, the design aims to strengthen connections between food, heritage, and community within Clonakilty.
