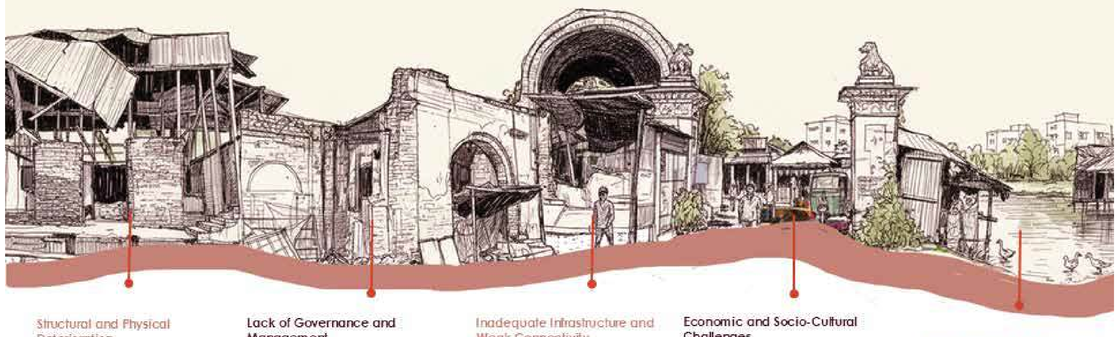
Issue



Structural and Physical Deterioration

- Neglect and structural decay of heritage buildings
- Poor maintenance of existing heritage structures.
- Some buildings are in a risky condition or occupied unsafely

Lack of Governance and Management

- Absence of a clear management authority.
- Lack of proper development control rules and heritage area guidelines.
- Abduction or misuse of government property.

Inadequate Infrastructure and Weak Connectivity

Narrow lanes, poor accessibility, lack of parking, and inadequate public amenities such as signage, shelters, and food stalls.

Weak physical and spatial connections between landmarks, with neglected routes and inaccessible heritage zones diminishing overall site cohesion and experience.

Economic and Socio-Cultural Challenges

- Lack of sustainable revenue generation and limited investment in heritage-based businesses.
- Low tourism activity due to poor promotion and inadequate facilities.
- Decline of cultural practices and local traditions
- Loss of public gathering spaces

Environmental and Landscape Neglect

Neglected water bodies and ruined landscapes.

Lack of planned green areas or ecological conservation.

No proper parks or open recreational facilities.

Design Intervention

MACRO

- Alternative road development
- Pedestrian pathway development
- Policy
- Ecology conservation

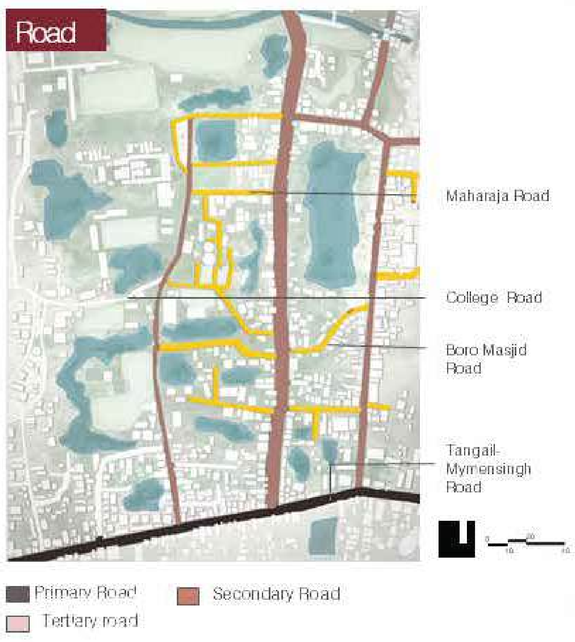
MESO

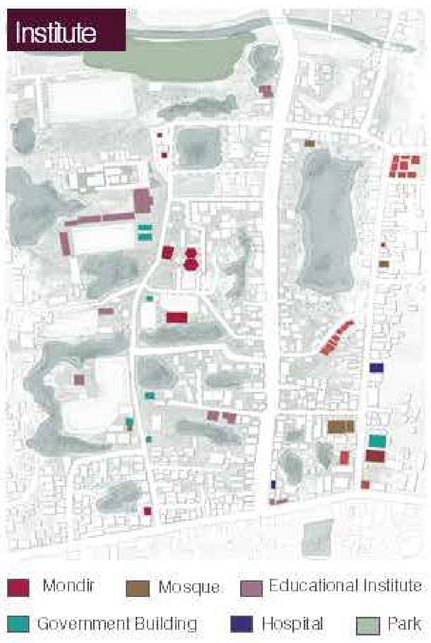
- Tourist hub
- Mixed Use hub
- Community hub

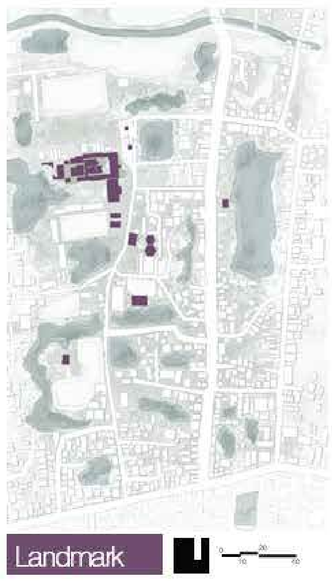
MICRO

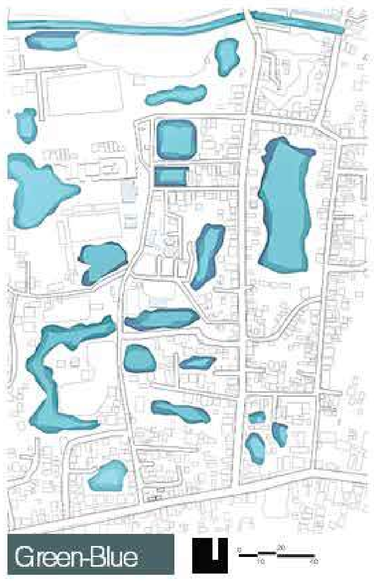
- Adaptive reuse
- New building

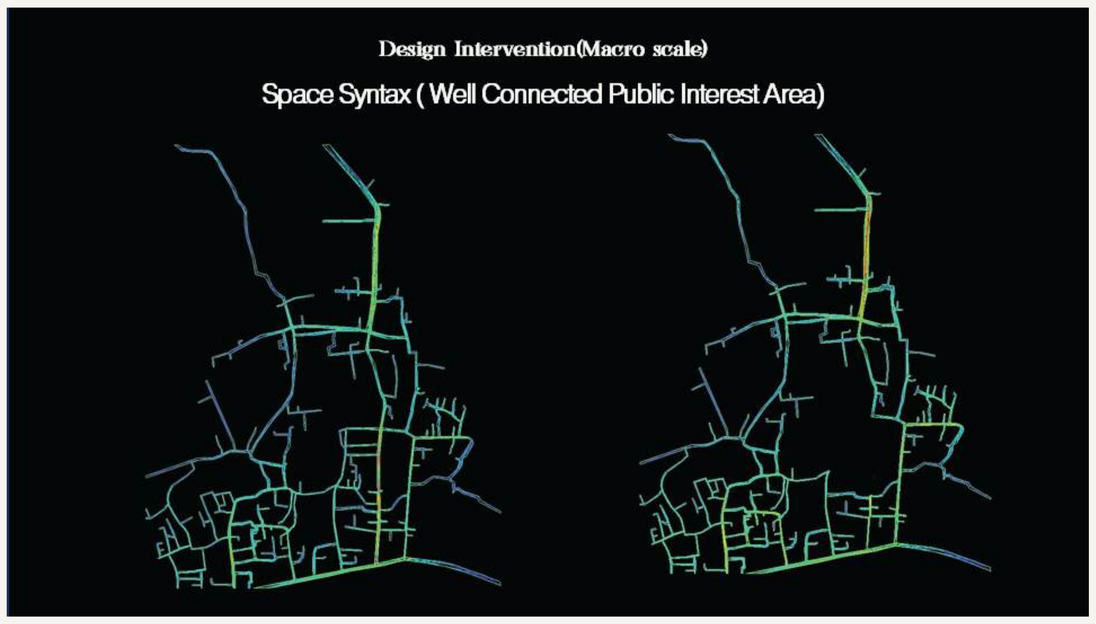
Macro Scale

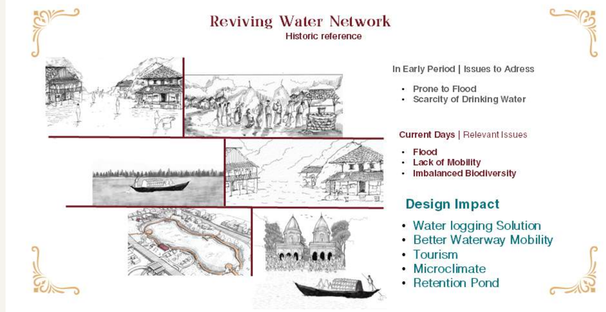


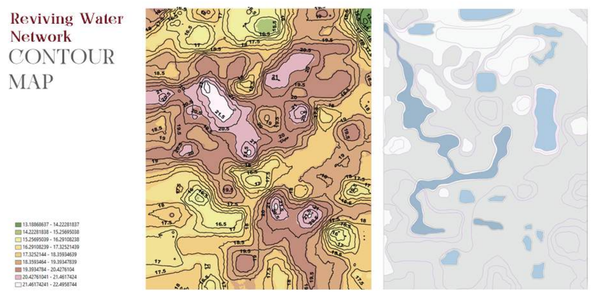




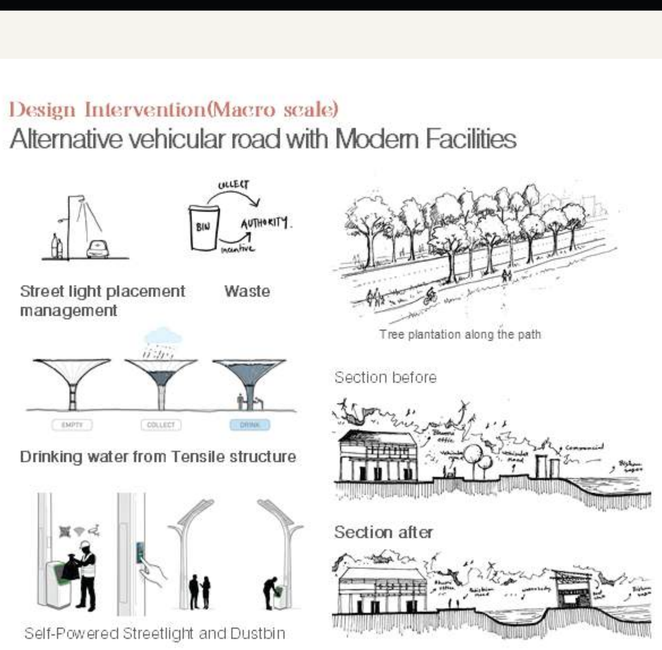








Existing Texture



Design Intervention (Macro Scale)

my design utilizes a three-tier intervention framework—Macro, Meso, and Micro—to address connectivity issues and establish regional heritage policies across the trail network. This scalable approach seamlessly bridges the gap between large-scale historical corridors and site-specific architectural inserts that celebrate local community traditions
