## PUNTARENAS: URBEM IN AQUA, COSTA RICA

Kevin Quesada C16136 / María Job Castillo-C01833

In response to the climate crisis and as part of the development of a new Puntarenas, Sensescape is a resort complex that combines tradition and innovation under the concept of interconnection and encounter. The project is conceived within a futuristic context with an ecological focus, seeking to redefine the interaction between humans, nature, and local culture.

The resort's design draws inspiration from nature's organic forms, such as ocean waves, thereby blending seamlessly into the surroundings. At the same time, it features structures interconnected through sensory gardens and public spaces designed to create a seamless experience between accommodations and recreational areas, while fostering social interaction and cultural roots. Beyond traditional lodging, it offers immersive experiences through advanced technologies, native vegetation, and activities that evoke the roots of Puntarenas.

Committed to sustainability, Sensescape utilizes solar energy, water conservation systems, and environmental preservation measures to integrate with the ecosystem. This project not only revitalizes Puntarenas' culture but also democratizes public space and creates a unique bond between locals and visitors in an inclusive and eco-friendly environment.
