

Urban Scale

Urban Strategy and Landscape Integration

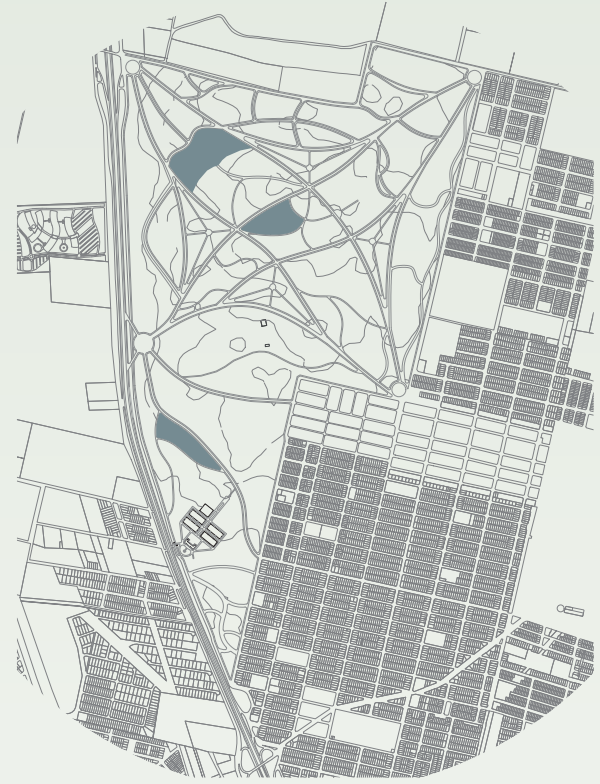

The project stems from a fundamental premise: to reverse the deficit of large green spaces in San Miguel de Tucumán. Therefore, we made the conscious decision to preserve the majority of the land as a metropolitan-scale green lung, prioritizing reforestation and urban permeability. Functionally, the site is organically structured through three large macro-sectors that organize the area:

Interurban Facilities: A regional-scale hub that concentrates sports, educational, and commercial activities.

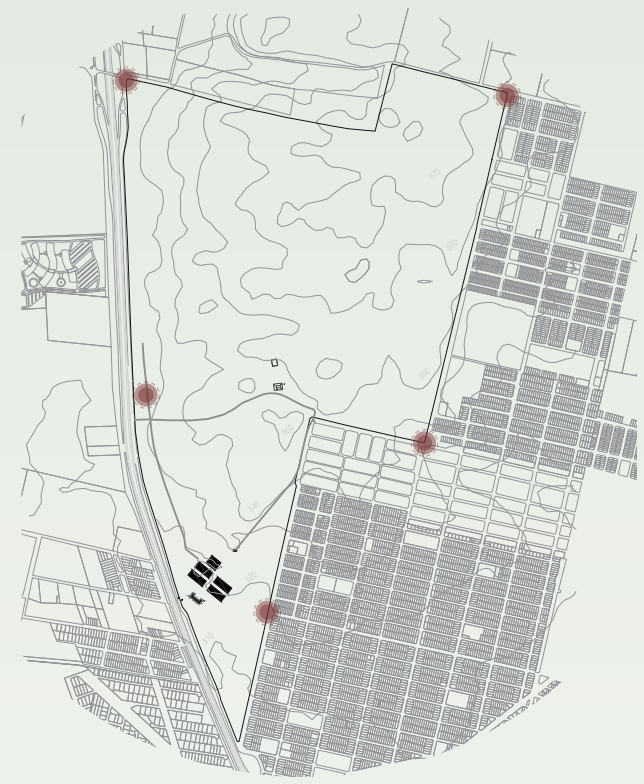

Memory Park: A space for reflection and civic engagement that integrates the open landscape with the program of the Museum of Memory.

Urban Facilities: A consolidated cultural and social center centered around the Arts Center.
