

A place for another function Redensification of Miramón Park

Fair area + Hybrid Building. Transformation of a monofunctional technology park into a vibrant, mixed-use and sustainable place (work, live, learn and enjoy).

How they integrate into architecture...

The UTA units are located on the roof and will remain camouflaged. They will be elegantly concealed with thermally treated wooden slats, integrating discreetly into the design. On the photovoltaic panel, they are left visible in order to convey the building's technological and modern image. Furthermore, the panels can also function excellently as solar shading elements, providing functionality and sustainability.
