The basement

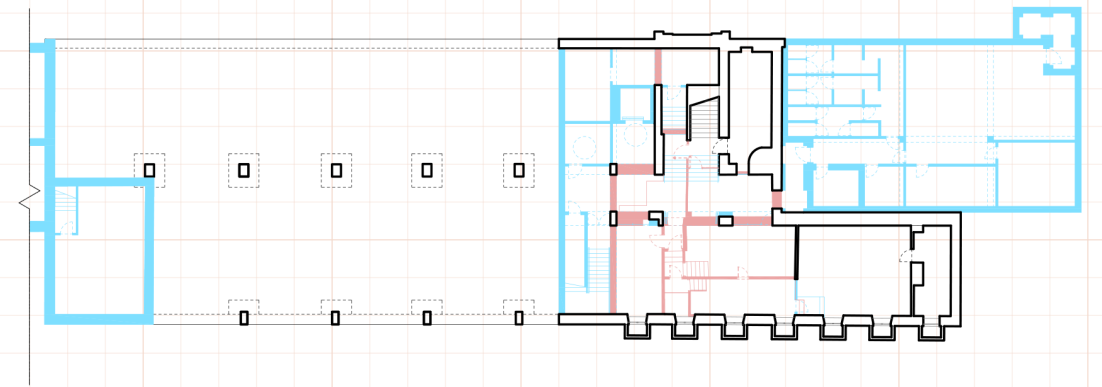

The basement serves as technical, storage and protective back-of-house space. The most important element of this level is the proposed shelter, supplemented by rooms supporting the building's everyday operation.

The ground floor

The ground floor forms the main, most public level of the building. Its centre is the machine hall, visible through glazing from the entrance hall, with the entire floor organised around this space.

The first floor

The first floor combines teaching and collaborative work functions in the university section with the residential function of the student-housing section. This level develops the building's everyday programme, based on learning, work and living.

The second floor

The second floor continues the building's functional layout, housing studios and classrooms in the university section and rooms in the student-housing section. This level also contains the second connection, apart from the ground floor, between the two parts of the building.

The third floor

The third floor houses important shared and representative functions. In the university section, there is an auditorium and a terrace overlooking the Old Town and Powiśle.
